

Walnut Natural
Réalisation F-Plus

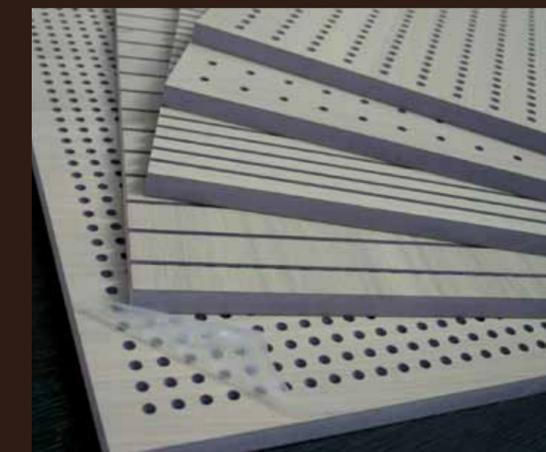

Put your first order through and discover the advantages of Aranya :

- A sumptuous decor,
- A higher quality finish,
- An unbeatable price for the full package : panel + finishing.
- Considerable time saving,
- A product even more environmentally friendly.

3. Another useful tip : you need 2 or 3 boards of 39 or 45 mm ? No problem: a sandwich composed of one sheet of PU foam and 2 boards of Aranya 9 mm and the trick is done !The edging can also be made in 9 mm cut in a 45 degree bevel.

4. To special order, Aranya is also available as perforated acoustic panels. Send us your specification!

Craftmanship can be measured

The concept *Aranya* was first presented at the ZOW exhibition in Germany in February 2009 and its market share hasn't stopped growing since.

Aranya is the result of a brain storming with the purpose to emphasize all qualities of veneered board and improve it technically in order to bring veneered panels into the 21st century.

This new concept combines economy and ecology: all components of *Aranya* are chosen because of their fully proven neutral impact on environment. Furthermore, the production of *Aranya* is planned on an industrial scale and guarantees the highest standards of quality for a most competitive price. *Aranya* is the panel of the 21st century, the board of the future, the ultimate solution in veneered boards.

Finally, concern for environment is designed into *Aranya* :Veneer is already environmentally friendly by nature as valuable wood is sliced in thin layers and represents less than 5% of the final volume of a board. But *Aranya* goes even further as all its components (core and veneer) are PEFC certified (coming from sustainably managed forests). Crucial features are the adhesives which are totally free of formaldehyde and the lacquers which are totally free of solvents.

The finish

The finishing lacquer is UV cured, completely free of solvents and, of course, formaldehyde free. The gloss offered is a 5% sheen which keeps *Aranya* in harmony with current design trends, mimicking as close as possible the appearance of natural wood. The lacquered faces are then protected with an easy-peel film which not only prevents bumps and bruises during subsequent handling but allows all further machining (cutting, drilling routing & planing) to be carried out prior to removal.

The substrate

The core board is an MDF Pure, PEFC Certified (its wood comes from sustainably managed forests) and produced with glues entirely free of formaldehyde. The size is 2750 x 1220 mm. It is available ex. stock in 19 mm A/A and also in 9 mm A/Red.

The glues

The glues used for the veneering are completely formaldehyde free too which makes of *Aranya* the veneered board with the lowest value of formaldehyde emission available on the market: less than 0.12 mg HCHO/h.m² according to EN 717-2.

Finishing the edges ?

Edge finishing is very easy but requires a change of practice: From now on, you need to finish the edges not before faces but after. You have two options :

1. Either you apply a pre-lacquered veneer edging on the edge. These pre-lacquered edgings are also part of the concept of *Aranya*. Those edgings are available in the following sizes: thicknesses of 0.6 mm and 1.5 mm with widths of 22 mm and 44 mm. Some edgings are also available pre-glued. Their application happens exactly as normal edge banding. However, finally: once the edging applied and planed, you still have a little corner of about 0.5mm which needs to be finished too. For this purpose, we provide you special stylo felt pen which you just need to slip along the corner (Check first if some light sanding is required). These stylos pens are available in the same colours as the faces.

A little tip to help you finish these corners easily: Put two boards next to each other separated by about 2 mm and put against a firm edge in order to avoid slipping. Result: you don't slip with the pen anymore, you can keep the line straight and you work 4 to 5 times quicker...

What first strikes you with *Aranya* is the impression of perfection which is shining from this board allying tradition and progress in an environmentally friendly spirit and which utilizes only first choice materials.

Walnut Natural
Réalisation : BEVA Keukens

Veneers : Rift cut Oak or Crown cut Walnut, on both faces Random Matched but Colour Matched in order to perfectly balance the decor and to break the blandness of a repetitive pattern. They create a feeling of unequalled serenity. Walnut is shown in its natural colour, with all its shades.

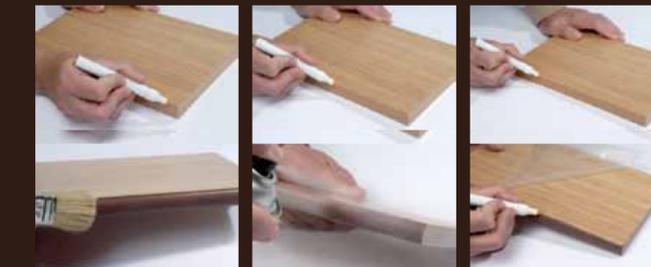

Oak is offered in 6 colours, all of them carefully selected according to actual trends. From "Desert" bleached as the sand of Sahara to the "Coal" as black as Bog Oak, going through 3 shades of Grey from "Smoke" to "Sherwood" passing through "Rock", *Aranya* fulfils all wishes from the most requesting experts still keeping a compact range in order to avoid a difficult quest into plethoric choices which create confusion..

The decors

Aranya is available in two species and six colours in 19 mm A/A and in 9 mm A/R.

2. Or perhaps, if you want to chamfer up the edge leaving the MDF raw. This is perfectly possible. You can then finish it with a water-based lacquer which you can apply with a spray gun or a brush. (the polythene film is there to protect the face). This being done, you use the same technique as in the previous case: you peel off the film and you finish the tiny corner with a light sanding followed by the stylo pen.

Aranya is now fit to be used anywhere.
