

WOOD4EVER

SeBo Interior & Equipage

An authentic touch for all your creations

Nowadays, we feel more and more the need to go back to our roots. This has generated a new trend in interior design: mixing modern products with authentic ones.

With the **Wood4Ever** collection, Finaspan is bringing the authentic touch in your interiors thanks to a thick veneer board: 1.5 mm and 2.4 mm. The veneer is random matched in order to keep the authentic character of the wood.

Advantages are countless:

- you can brush a structure deeper into the veneer,
- you can router and groove them deeper, and
- or you can add a sawn effect

When jointing two pieces together on an angle, the joints will be stronger. Also, a thicker veneer lends itself more effectively should there be a need for minor repairs to be made to the face surface of the veneer. Finally, they will remain more stable over time: no cracks or splits because of sunlight or central heating.

In short, all the advantages of solid wood without the disadvantages! In one word, these boards are made to last!

Available species ex-stock: Oak in various grading (Quarter Cut, Crown Cut, Book Matched, Random Matched, Rustic, etc) but also Ash, Maple, Walnut, Larch, Wenge or Zebrano.

Brushed or sandblasted, your choice !

Brushing

See Wood, feel Wood! Thanks to a clever and accurate brushing process, it is now possible to enhance the structure of the timber and allow us to appreciate the sensuous effect created. Let your fingers glide over the surface of a brushed wood veneer, you won't forget the sensation: Reconnect with the tactility of wood and get back to your roots.

Sandblasting

For those who are looking to produce a more extreme or rustic appearance, Finaspan can also offer a sandblasted finish. As the structure is obtained through high-speed projection of small mineral particles onto the veneer surface, the structure will not only be deeper but also rougher. In this case it is better to work with 2.4 mm, 3.0 mm, or even 4.0 mm for special enquiries.

Edgings

In order to increase the solid wood effect, special veneer edgings have been developed in thick veneer, particularly in rough sawn effect and in end grain wood.

These edgings are available in thicknesses of 1.2 and 1.5 mm and in 24 mm width.

Brushed

Sandblasted

Edgings

Veneer species 18 species : from Oak to Bamboo through Walnut, Ash, Maple Larch or even Wenge and Zebrano

Jointing pattern	Random
Thickness of the veneer	1.5 mm or 2.4 mm (other thicknesses on demand)
Dimensions	2500 x 1240 mm and 3050 x 1220 mm
Core board	MDF (other coreboards on demand)
Core thickness	18 mm (other thicknesses on demand)
Finish	Brushing / Sandblasting
Edging	Rolls 24 mm width with a thickness of 1.2 mm or 1.5 mm (with rough sawn effect and in end grain wood)
